

PIN ON EDGE

TRADITIONAL FIX

Product Code: DFS04
Materials: Stainless Steel A2 standard (or A4 for Facade+)
LDPE 650
Facade Material: Choose from 1,000's of materials and finishes.

Designed, Manufactured and Tested in the UK.

A SPECIALIST STAINLESS STEEL SUPPORT SYSTEM

For Natural Stone cladding panels.

DFS04, also known as "Pin on Edge" is a traditional fix support system. It offers 3 way adjustment for precise mechanical installation.

The system comprises of a corbel bracket to the base of the elevation to transfer the dead load to the primary structure. 3 way adjustable retention fixings are used to retain the stone to the substrate. With 4 retention fixings evenly spaced per panel the fixings absorb lateral load and wind load. By using plastic dowel covers stress points within the fixing can be reduced.

Technical details for the system are in accordance with BS 8298.

This Traditional Fix System is an ideal support system for a wide range of natural stone panels with a thickness range from 30mm to 100mm. The system is suitable for both standard grid and random pattern facades.

If panels are required to be independently supported then fixings from the image below can be used. This Pin on Edge fixing DFS04-DR offers a combined Dead load (D) and Restraint (R) solution. This enables a panel to be removed without having to deconstruct adjoining panels.
